

ISO 15040:1999, Composites -- Prepregs -- Determination of gel time

This International Standard specifies a method for the determination of the gel time of prepregs made of continuous reinforcement impregnated with epoxy and/or unsaturated-polyester resin. The method is applicable to most prepregs with a width in the range 300 mm to 1000 mm. It is not suitable for very narrow prepregs (for example narrow tape), nor for prepregs with a low resin content. This title may contain less than 24 pages of technical content.
