

Low-Cost Warning Device Industry Assessment

Under direction of the Federal Railroad Administrations Office of research and Development, the U.S. Department of Transportations Research and Innovative Technology Administrations John A. Volpe National Transportation Systems Center conducted a technology assessment of low-cost active waning devices for application at passive highway-rail grade crossings. The objective of this research was to present an objective assessment of the available low-cost warning device technologies and recommend a migration path that would be facilitate implementation in the U.S.
